JPARepository INTRODUCTION

- ❑ JpaRepository là một API được hỗ trợ bởi Spring Boot giúp lập trình tương tác với CSDL theo phương pháp truy vấn đối tượng bằng JPQL (Java Persistence Query Language) một cách đơn giản và hiệu quả.
- ❑ Các thao tác dữ liệu như thêm, sửa, xóa và truy vấn đơn giản đã được JpaRepository xây dựng sẵn mà không cần phải viết thêm bất kỳ một dòng mã nào.
- ❑ Các truy vấn phức tạp bạn chỉ cần chú thích với @Query với đối số là JPQL
- ❑ Cơ chế sắp xếp, phân trang linh hoạt, dễ dàng
- ❑ DSL (Domain Specific Language) giúp bạn không cần phải viết JPQL mà vẫn có thể truy vấn dữ liệu một cách đơn giản.

Methods	Methods
findAll(): List<T>	delete(T)
findAll(Sort): List<T>	deleteById(ID)
findAllByIds(Iterable<ID>):List<T>	deleteAllById(Iterable<ID>)
findAll(Pageable): Page<T>	deleteAllByIdInBatch(Iterable<ID>)
findById(ID): Optional<T>	deleteAll()
getReferenceById(ID): T	deleteAll(Iterable<T>)
save(T): T	deleteAllInBatch()
saveAndFlush(T): T	deleteAllInBatch(Iterable<T>)
saveAll(Iterable<T>): List<T>	count(): long
saveAllAndFlush(Iterable<T>): List<T>	existsById(ID): boolean

CATEGORYDAO AND CATEGORYSERVICE

```
public interface CategoryService {
    List<Category> findAll() ;
    Category findById(String id) ;
    Category create(Category entity) ;
    void update(Category entity) ;
    void deleteById(String id;
    boolean existsById(String id) ;
}
```

implements

4.1

```
@Service
public class CategoryServiceImpl implements CategoryService {
    @Autowired
    CategoryDAO dao;
    ...
}
```

use

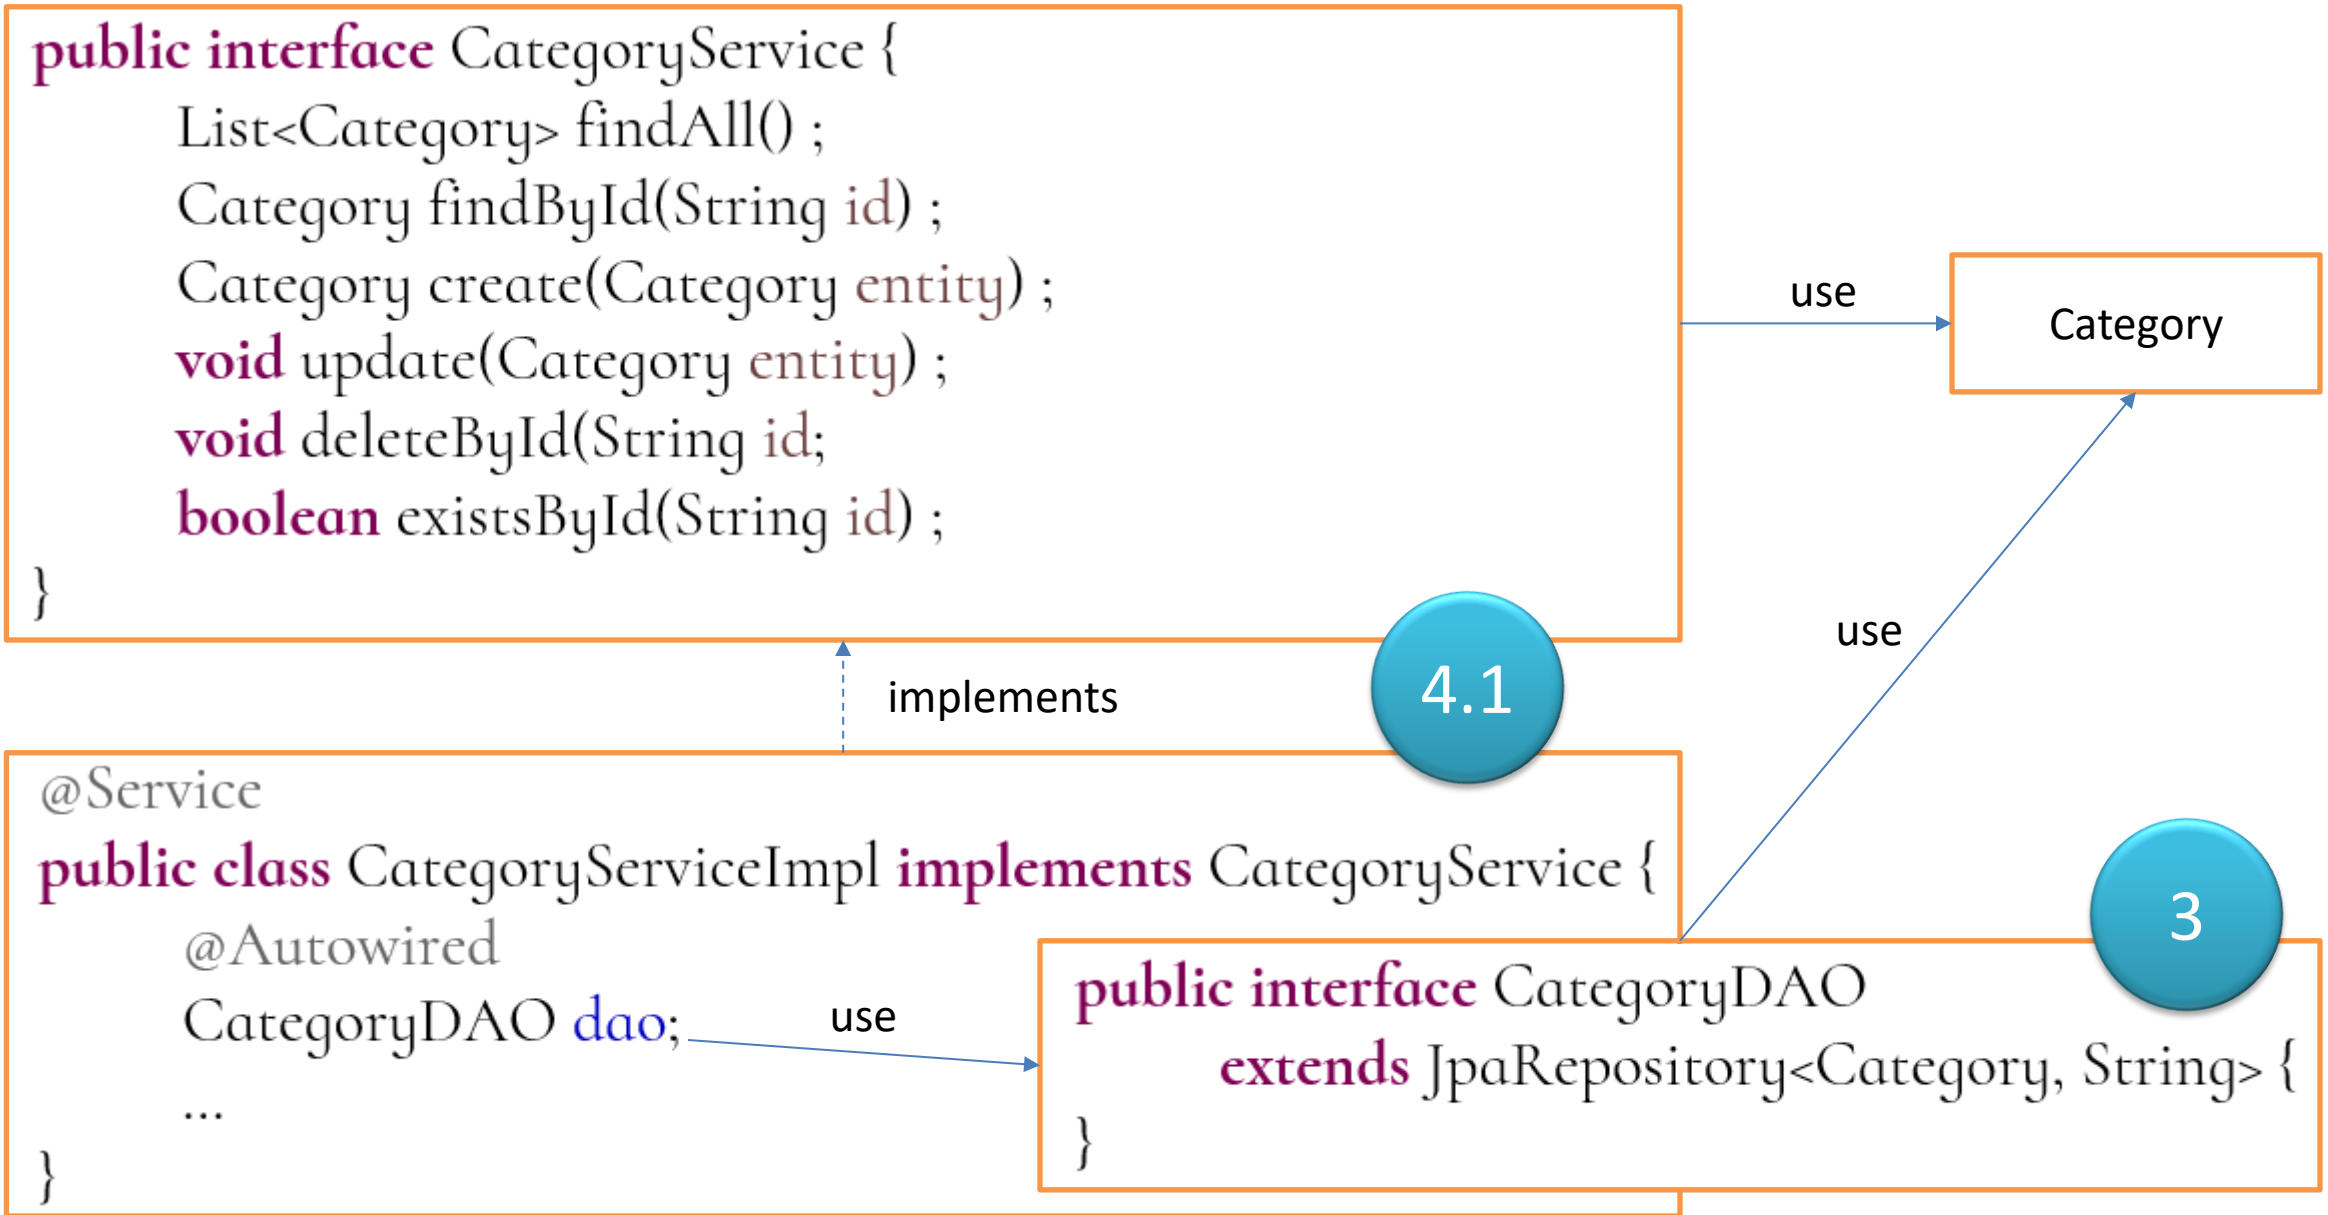

```
public interface CategoryDAO
    extends JpaRepository<Category, String> {
}
```

SORT ANG PAGINATION

```
Direction direction = Direction.DESC;  
String property = "name";  
Sort sort = Sort.by(direction, property);  
List<Category> list = dao.findAll(sort);  
list.forEach(c -> System.out.println(">> " + c.getName()));
```

❑ Direction

- ❖ Direction.ASC
- ❖ Direction.DESC

❑ Sort

- ❖ Sort.by(String...properties)
- ❖ Sort.by(Direction direction, String...properties)

```

int pageNumber = 0;
int pageSize = 8;
Sort sort = Sort.by(Direction.DESC, "name");
Pageable pageable = PageRequest.of(pageNumber, pageSize, sort);
Page<Category> page = dao.findAll(pageable);

System.out.println("1. PAGE ELEMENTS:");
List<Category> list = page.getContent();
list.forEach(c -> System.out.println(">> " + c.getName()));
System.out.println("2. PAGINATION INFO");
System.out.println(">> Page Number: " + page.getNumber());
System.out.println(">> Page Size: " + page.getSize());
System.out.println(">> Number of Elements: " + page.getNumberOfElements());
System.out.println(">> Total Elements: " + page.getTotalElements());
System.out.println(">> Total Pages: " + page.getTotalPages());

```

- ❑ Pageable
- ❑ PageRequest
 - ❖ PageRequest.of()
- ❑ Page
 - ❖ getContent()
 - ❖ getNumber()
 - ❖ getSize()
 - ❖ getNumberOfElements()
 - ❖ getTotalElements()
 - ❖ getTotalPages()

- ❑ Pageable: quản lý thông tin yêu cầu phân trang
 - ❖ Pageable.ofSize(int pageSize)
 - ❖ Pageable.unpaged()
- ❑ PageRequest: lớp tiện ích hỗ trợ tạo Pageable
 - ❖ PageRequest.of(int number, int size)
 - ❖ PageRequest.of(int number, int size, Sort sort)
 - ❖ PageRequest.of(int number, int size, Direction direction, String...properties)

❑ Nội dung trang

- ❖ getContent(): List<T>
- ❖ toList(): List<T>

❑ Các thông số phân trang

- ❖ getNumber(): int
- ❖ getSize(): int
- ❖ getTotalPages(): int
- ❖ getNumberOfElements(): int
- ❖ getTotalElements(): int

❑ Kiểm tra

- ❖ isEmpty() : boolean
- ❖ isFirst() : boolean
- ❖ isLast() : boolean
- ❖ hasContent() : boolean
- ❖ hasNext() : boolean
- ❖ hasPrevious() : boolean

❑ Điều hướng phân trang

- ❖ getPageable(): Pageable
- ❖ previousPageable() : Pageable
- ❖ previousOrFirstPageable() : Pageable
- ❖ nextPageable() : Pageable
- ❖ nextOrLastPageable() : Pageable
